

Brain Function in Rolandic Epilepsy Permission to contact form

Dear Parent or Guardian,

We do not know the cause of rolandic epilepsy (BECTS). We are working with other researchers to find the cause of types of epilepsy affecting children. To this, we need to study children with epilepsy and their relatives. In our study, we ask children to have a brain (MRI) scan. We ask about your family's medical history, and take DNA samples from blood. Your information will remain confidential and will help us to understand the causes of childhood epilepsy.

We would like to ask you to provide your contact information below so that a member of our research team can contact you, explain this study to you in more detail, check if your child is suitable for this study and ask if you would like to participate. If you would like us to do that, please complete the form below.

CONTACT INFORMATION

Your name and Address:

Preferred Telephone:

 (Daytime)

 (Evening)

Email Address (optional):

Child's name:

What time would you prefer to be contacted?

Signature of parent/guardian

Date

Name and Hospital of referring Consultant: _____

Please post this form to: Colm McGinnity, Postdoctoral Research Worker, Dept. of Clinical Neurosciences - P043, 1 Windsor Walk, Institute of Psychiatry, Kings College London, Denmark Hill, London SE5 8AF.

Or fax to: 0207 848 0988 **or call:** 0207 848 5162/0638 for more information.
